

EXPOSURE AND RISK ANALYSIS REPORTING

In an era where digital security is paramount, businesses cannot afford to be blind to the dangers lurking in the shadows of the dark web. User credentials and sensitive data, once exposed, become tools for cybercriminals, leading to potential security breaches, financial loss, and reputational damage. The team at Galix offers a critical line protection service, aimed at proactively identifying and mitigating these risks before they escalate into crises.

OBJECTIVES

- **Enhanced Cyber Security**
Significantly reduce human cyber risk and prevent costly security breaches.
- **Proactive Breach Alerts**
Keep ahead of threats with instant email notifications for affected users and admins.
- **Comprehensive Coverage**
Extend protection across all user email accounts associated with your domain.
- **Understand the Risk Impact**
Reduce your ongoing human risk score by quickly resolving user breaches.

WHY THIS SHOULD BE A FOCUS FOR YOUR ORGANISATION

- **Increased risk of unauthorised access.**
With stolen user credentials freely available on the dark web, businesses face a heightened risk of unauthorized access to their systems and sensitive data.
- **Targeted social engineering attacks.**
The availability of personal and corporate information on the dark web enables cybercriminals to deceive employees and compromise security.
- **Regulatory and compliance risks/fines.**
The exposure of sensitive data on the dark web can lead to breaches of regulatory compliance, resulting in fines and damage to reputation.

BENEFITS

Reduce Existing Risks

Identify sensitive user data that is currently available to attackers.

Prevent Future Breaches

By having visibility of users that are found in the latest breaches. Organisations can effectively manage their exposure.

Control Exposure

Implementing and promoting stricter acceptable use policies and identifying technological gaps.

Achieve Compliance

Demonstrate your data protection efforts and regulatory compliance.
